/*

ASSIGNMENT 1

Part1: Implement a menu-driven Java program (like fib or factorial) to implement these input methods in java (command line args, Scanner, BufferedReader, DataInputStream, Console)

Part2: Implement a simple menu driven calculator in java to implement add, sub, mul, div, sqrt, power, mean, variance. Implement a separate Calculator class to include all related function inside that class. (mean calculation : program reads numbers from the keyboard, summing them in the process until the user enters the string “end”. It then stops input & displays the avg. of numbers)*/

```
import java.util.Scanner;

import java.io.*;

public class input_calculator {

public static void main(String[] args) throws IOException, ArrayIndexOutOfBoundsException{

{//commandline arguments

System.out.println("Input taken trough commandline arguments: ");

System.out.print("Enter a number: ");

int num1 = Integer.parseInt(args[0]);

System.out.println("Number entered (commandline): " + num1);

//input option

input_options.input();

//calculator

calculator.calculation();}

}

}

class input_options {

static void input() throws IOException{
```

```
// Scanner object
Scanner Sc = new Scanner(System.in);
System.out.println("Input taken trough Scanner object: ");
System.out.print("Enter a number: ");
int num = Sc.nextInt();
System.out.println("Number entered (Scanner): " + num);
//BufferedReader object
InputStreamReader r= new InputStreamReader(System.in);
BufferedReader br = new BufferedReader(r);
System.out.println("Input taken trough BufferedReader object: ");
System.out.print("Enter a number: ");
String n = br.readLine();
int num2 = Integer.parseInt(n);
System.out.println("Number entered (BufferedReader): " + num2);
//DataInputStream object
DataInputStream data = new DataInputStream(System.in);
System.out.println("Input taken trough DataInputStream object: ");
System.out.print("Enter a number: ");
int num3 = Integer.parseInt(data.readLine());
System.out.println("Number entered (DataInputStream): " + num3);
//console object
Console c = System.console();
System.out.println("Input taken trough console object: ");
System.out.print("Enter a number: ");
int num4 = Integer.parseInt(c.readLine());
System.out.println("Number entered (console): " + num4);
}
```

```
}
class calculator {
static void calculation() {
Scanner Sc = new Scanner(System.in);
while (true) {
System.out.println("Menu:");
System.out.println("1. Add");
System.out.println("2. Sub");
System.out.println("3. Multiply");
System.out.println("4. Divide");
System.out.println("5. Square Root");
System.out.println("6. Power");
System.out.println("7. Mean");

variance += Math.pow((num - mean), 2);
}
variance = variance / count;
System.out.println("Variance: " + variance);
break;
case 9:
System.out.println("Exiting...");
System.exit(0);
break;
default:
System.out.println("Invalid choice!");
```

```
break;
}
 }
 }
}
```

OUTPUT

```
Input taken trough scanner object:
Enter a number: 3
Number entered Input taken trough scanner object:
Enter a number: 1
Number entered (scanner): 1
Input taken trough BufferedReader object:
Enter a number: 2
Number entered (BufferedReader): 2
Input taken trough DataInputStream
object:
Enter a number: 3
Number entered (DataInputStream): 3Input taken trough console object:
Enter a number: 4
Number entered (console): 4
Menu:
1. Addition
2. Subtraction
3. Multiplication
4. Division
```

5. Square Root

6. Power

7. Mean

8. Variance

9. Exit

Enter your choice: 2

Enter first number: 5

Enter second number: 3

Result: 2.0

Menu:

1. Addition
